Different questions on the same protein

Binding-interface task
Which residues contact a protein partner?
Target: contact / non-contact

Allosteric-site task
Which residues have allosteric annotations?
Target: annotated site / background

Src functional-readout task
Which positions are mutation-sensitive?
Target: continuous effect magnitude

Conceptual schematic only: no measured distances or inferred signaling paths. Contact, allosteric annotation and functional sensitivity are different labels; they may overlap.
Allosteric sites may bind small-molecule effectors; not every function-sensitive position is an allosteric site.
