Src kinase domain: agreement with experimental functional sensitivity

a

Activation-segment reference

DFG407–APE435 · Y419

b

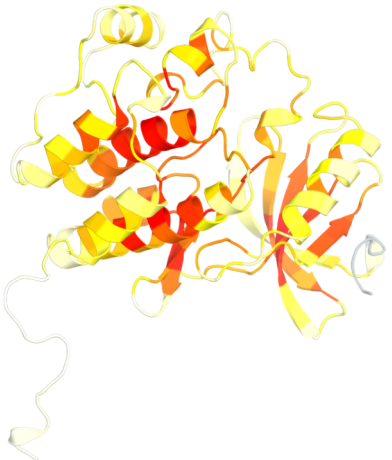

Experimental sensitivity

Mean |activity effect| per position

c

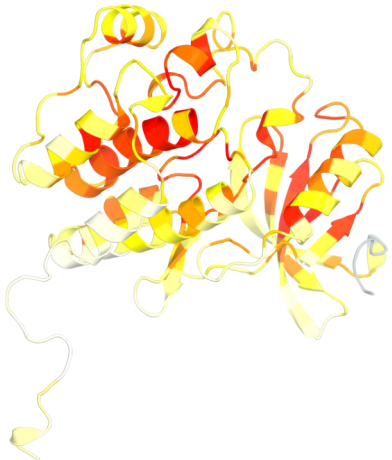

Structure-only probe

Spearman ρ = 0.511

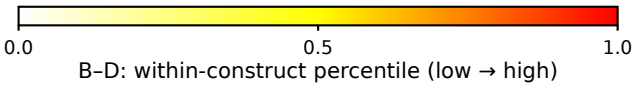

d

GSBind hidden probe

Spearman ρ = 0.667

Δρ = +0.156 over structure

Same AF2 structure, camera, crop and color mapping; gray: no evaluated effect. Correlations use all 269 positions, not selected sites.
Activation segment is anatomical context, not a prediction target. Functional magnitude does not specify activation direction. Source-test-selected OOF.
